

Introduction to Show Networking

KEVIN RHODUS

KEVIN@LDPLIGHTS.COM

Who Am I?

▶ Platform Integration Manager for Q-SYS

- ▶ Network-based audio, video and control systems
- ▶ Large networks with sub-microsecond synchronized timing and complex multicast management

▶ Lucy Depp Park Light Show

- ▶ 7.5 acres, 6 houses, 150k+ channels
- ▶ Show network spanning entire neighborhood
- ▶ www.ldplights.com

Agenda

- ▶ **What Makes a Network**
- ▶ **How Devices Communicate within a Network**
- ▶ **Building a Light Show Network**
- ▶ **Q&A**

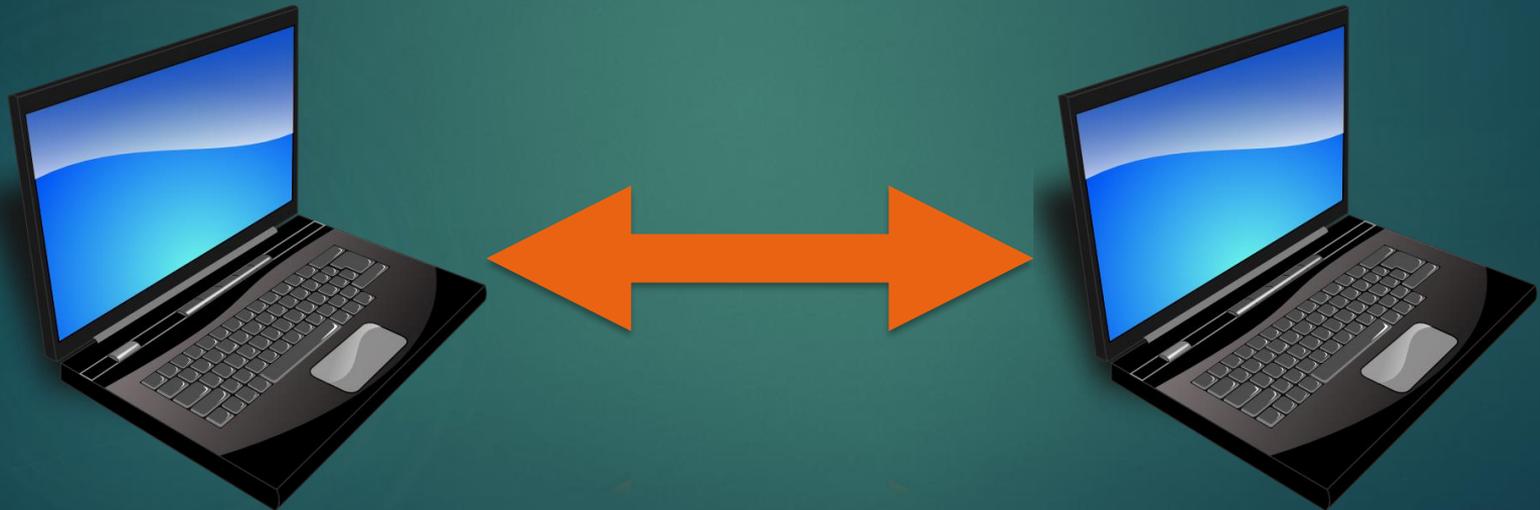

What Makes a Network

What is a Network?

- ▶ Two or more devices connected together to share data

Parts of a Typical Home Network

-Cable Modem

-Router

-Cabling

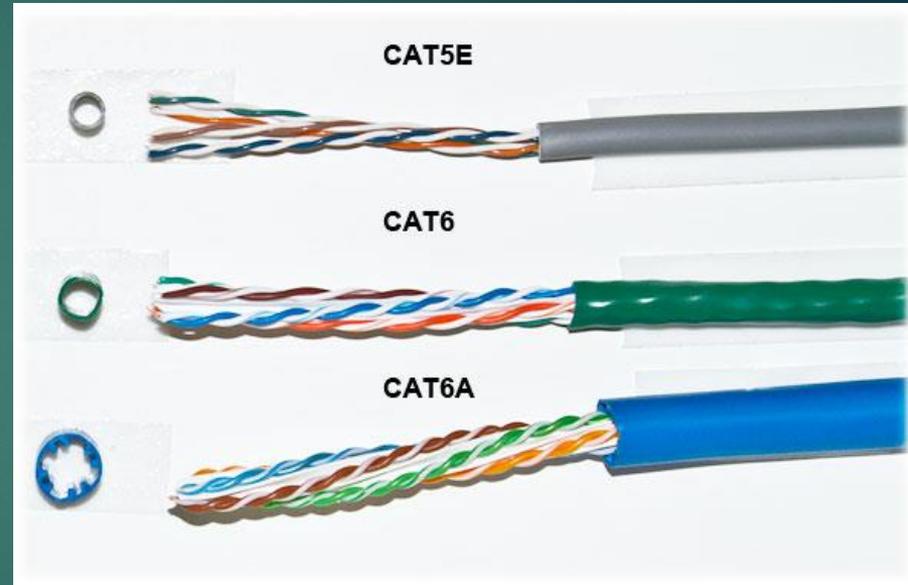

-Wifi Access Point

-Ethernet Switch

Cabling

- ▶ Category Twisted Pair
 - ▶ Unshielded (UTP)
 - ▶ Shielded (STP)
 - ▶ Plenum, Riser
 - ▶ Direct Burial / UV Resistant
- ▶ CAT 5e/CAT6/CAT6A
- ▶ RJ45 Connector
- ▶ Avoid Copper Clad Aluminum

Router

- ▶ Connects multiple networks together
 - ▶ Local network to internet
 - ▶ Local network to another local networks
- ▶ Main brain of the network
 - ▶ One per network
 - ▶ Contains DHCP server

Ethernet Switch

- ▶ Connects multiple wired devices together
- ▶ Sends data between devices on the network
- ▶ Data is only sent to the port that needs the data
- ▶ Ability to provide power to devices (POE)

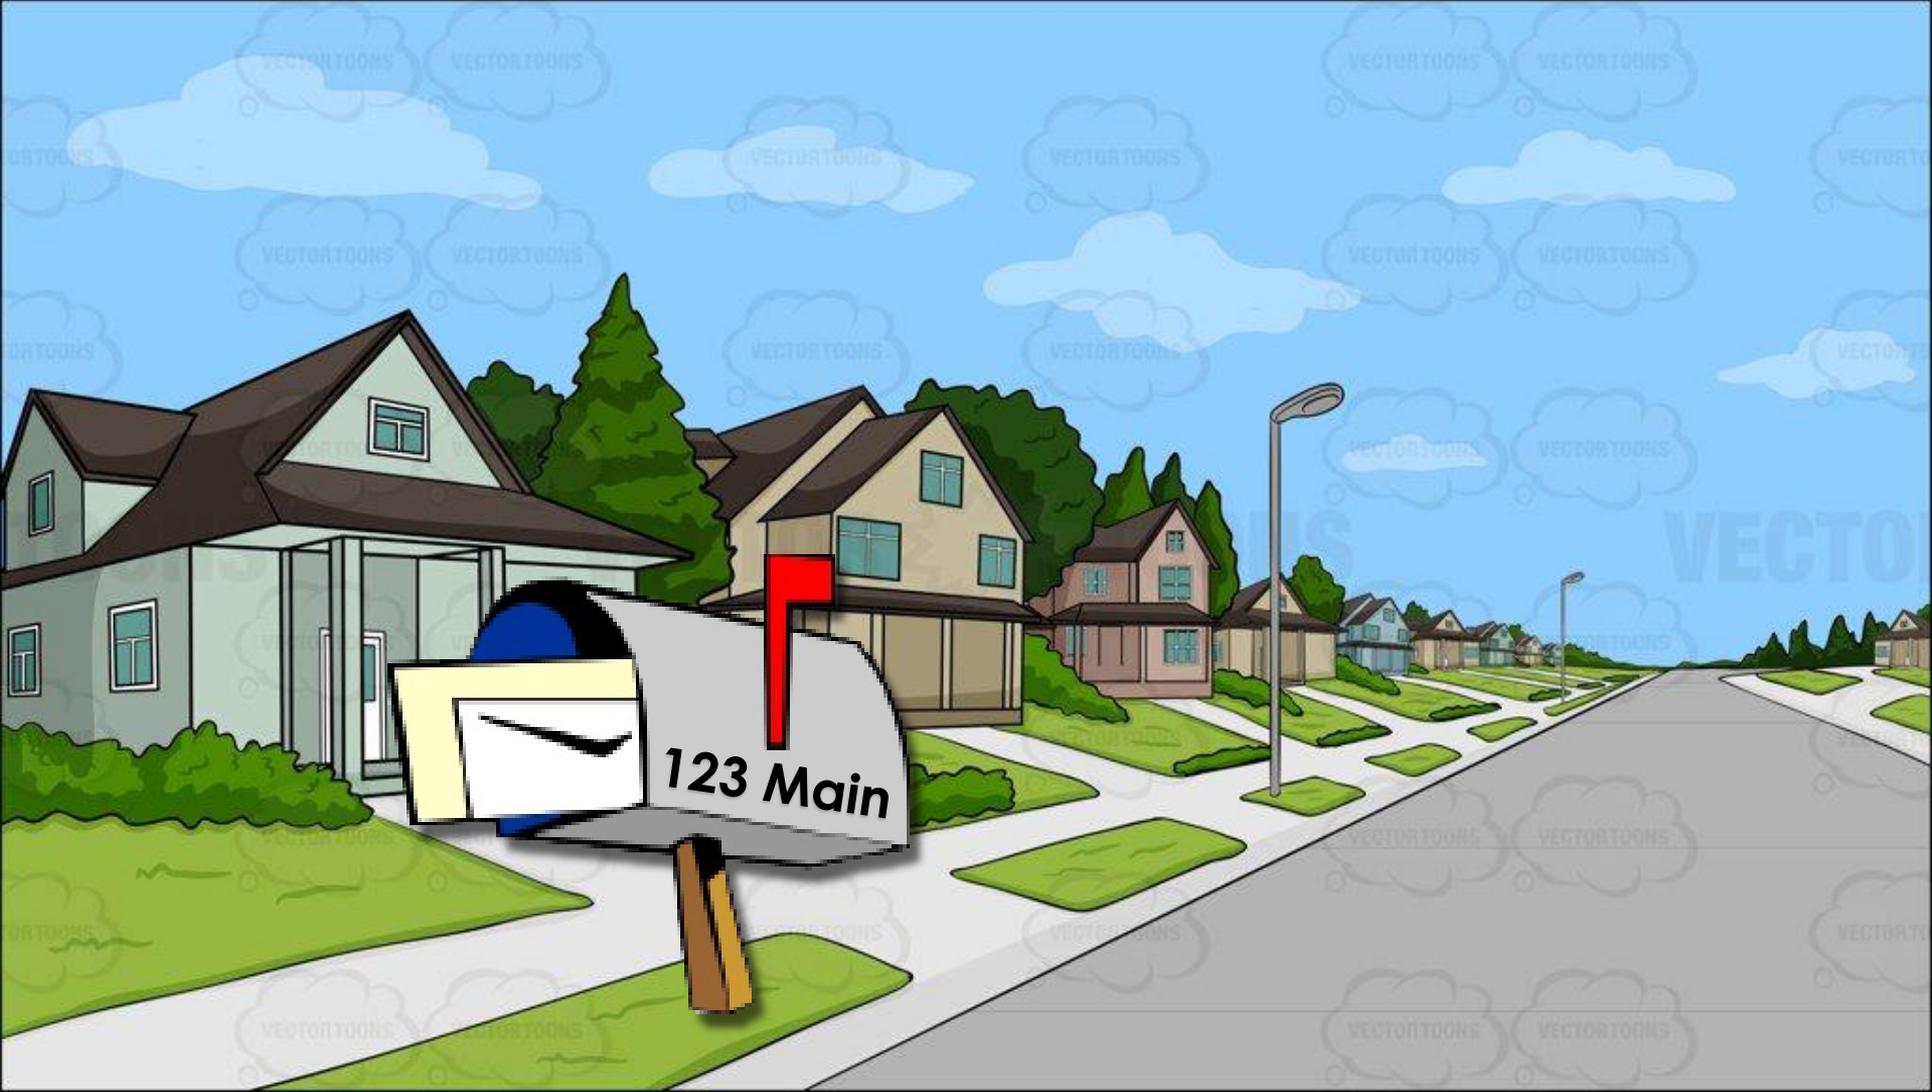

Wi-Fi Access Point

- ▶ Converts hardwired network to wireless
- ▶ Many consumer versions built-in to router
- ▶ Rated by spec – 802.11 a/b/g/n/ac/ax
- ▶ Max speed shared by all connected devices

How Devices Communicate within a Network

123 Main

IP Address: 192.168.1.123

IP Address Rules

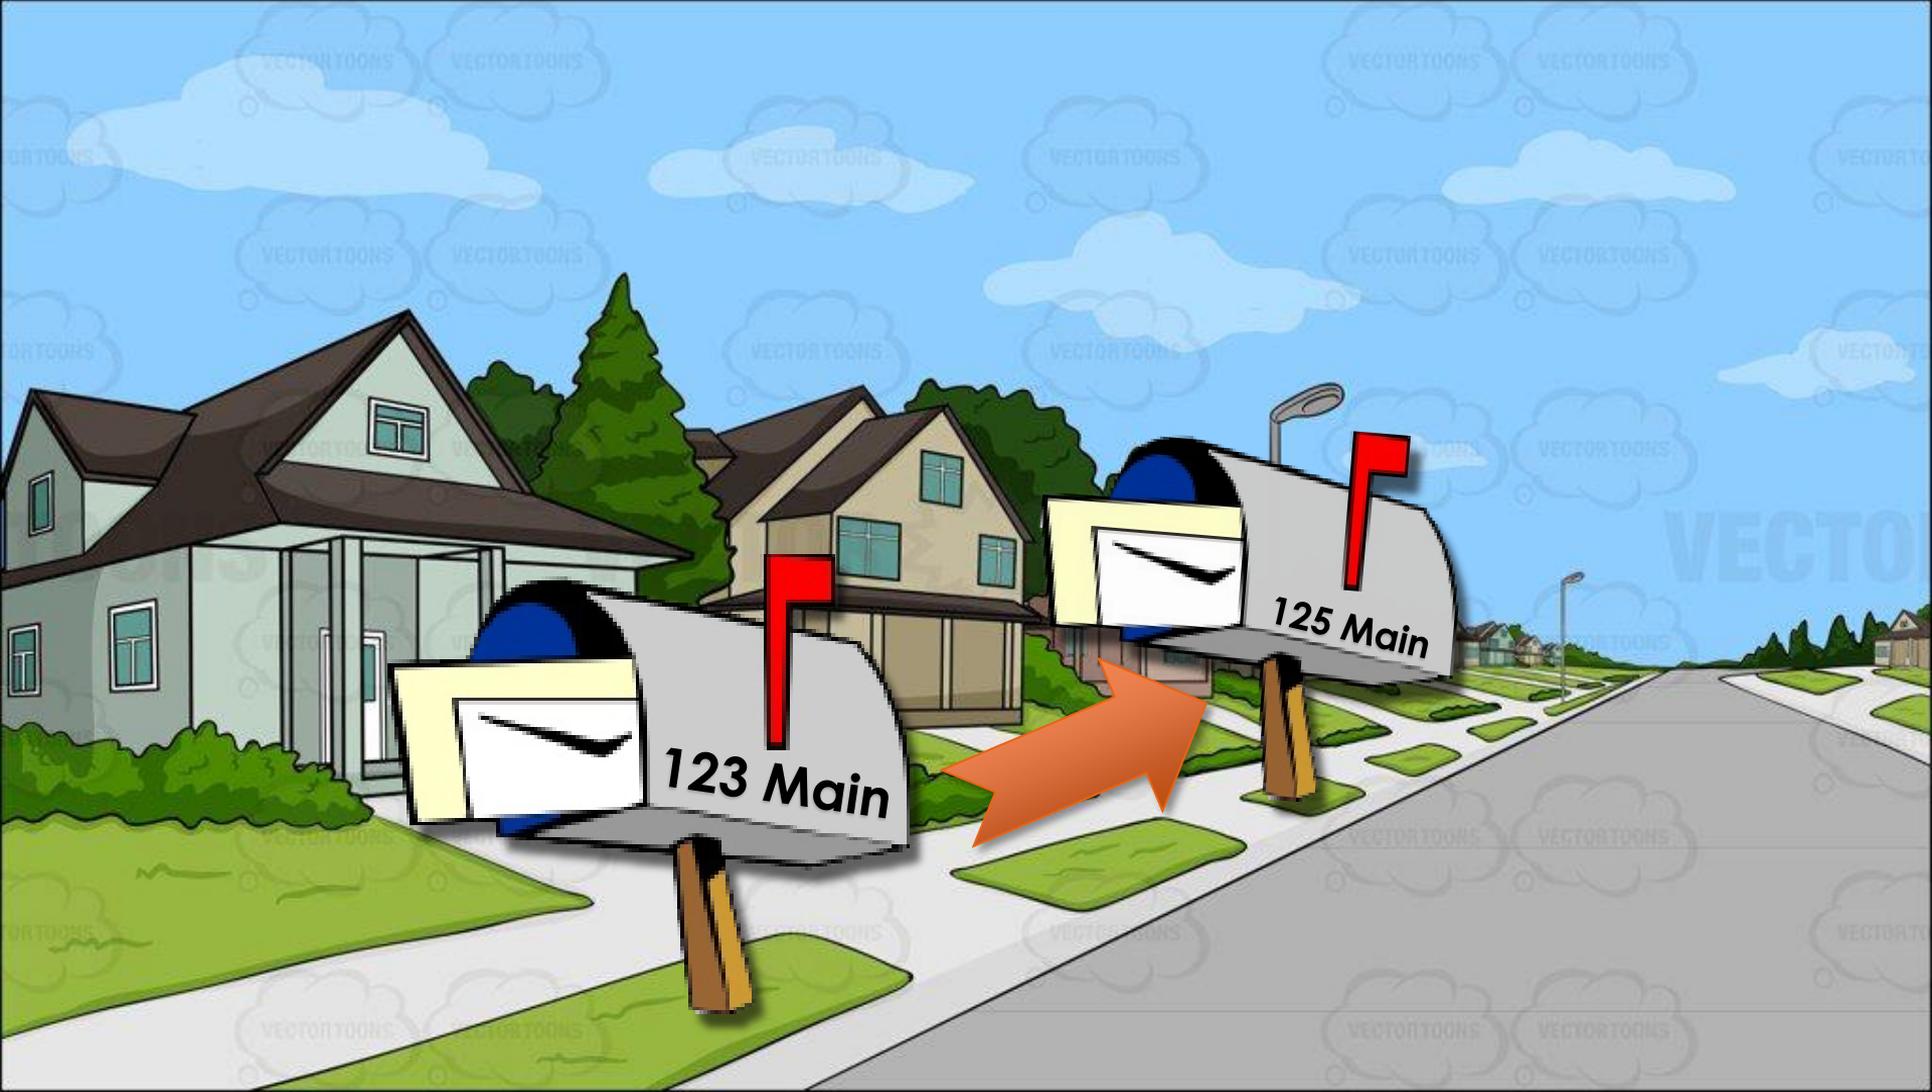

- ▶ IP must be within private IP range
 - ▶ 10.0.0.0 – 10.255.255.255
 - ▶ 172.16.0.0 – 172.31.255.255
 - ▶ 192.168.0.0 – 192.168.255.255
- ▶ No duplicate IP addresses on the same network
- ▶ X.X.X.1 and X.X.X.255 are reserved on a network.

Static vs Dynamic IP Addresses

- ▶ Most networks will assign an IP address automatically (DHCP)
- ▶ Typically a range of IPs the network hands out
- ▶ Router will (typically) renew after certain amount of time
- ▶ Reservation gives a device the same IP each time
- ▶ Static requires the user to manually set the IP address of each device

IP Address

192.168.1.123

192.168.1.125

IP : 192.168.1.123

Subnet: 255.255.255.0

192.168.1.1 – 192.168.1.255

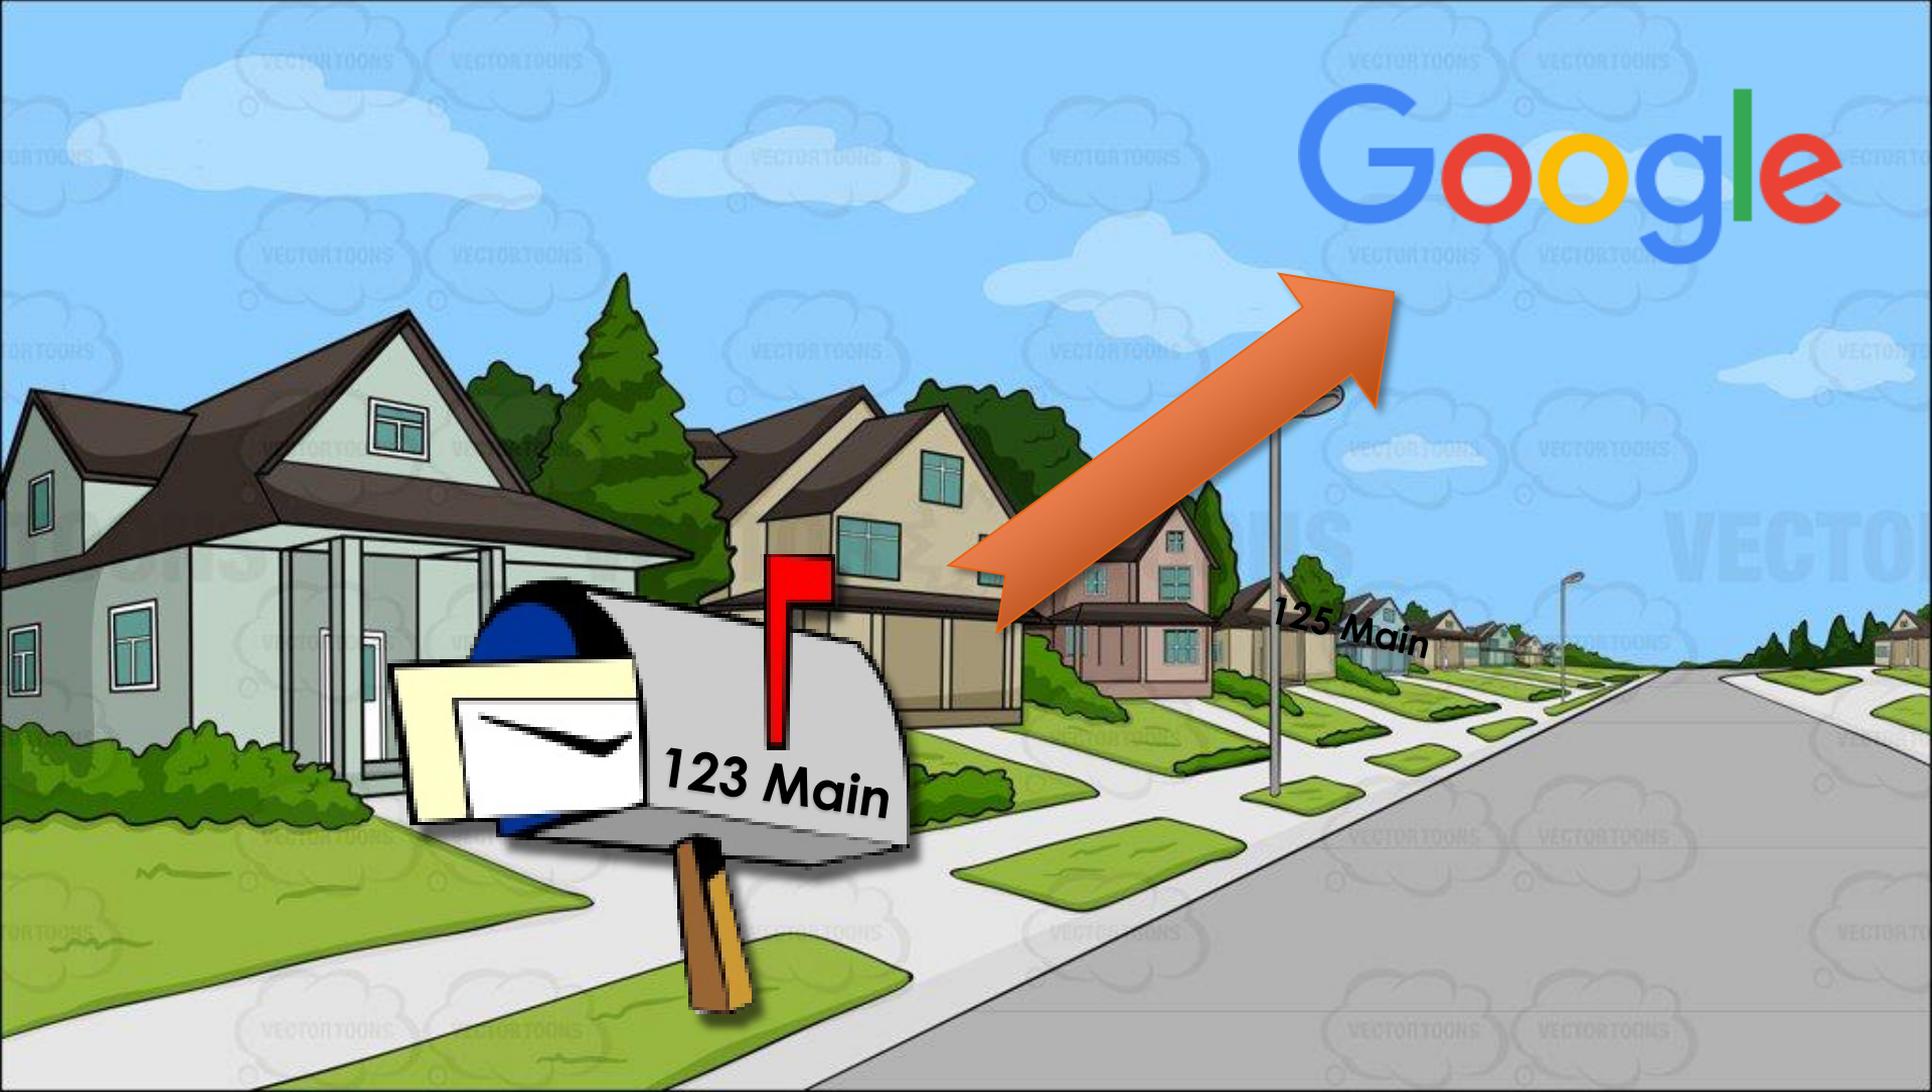

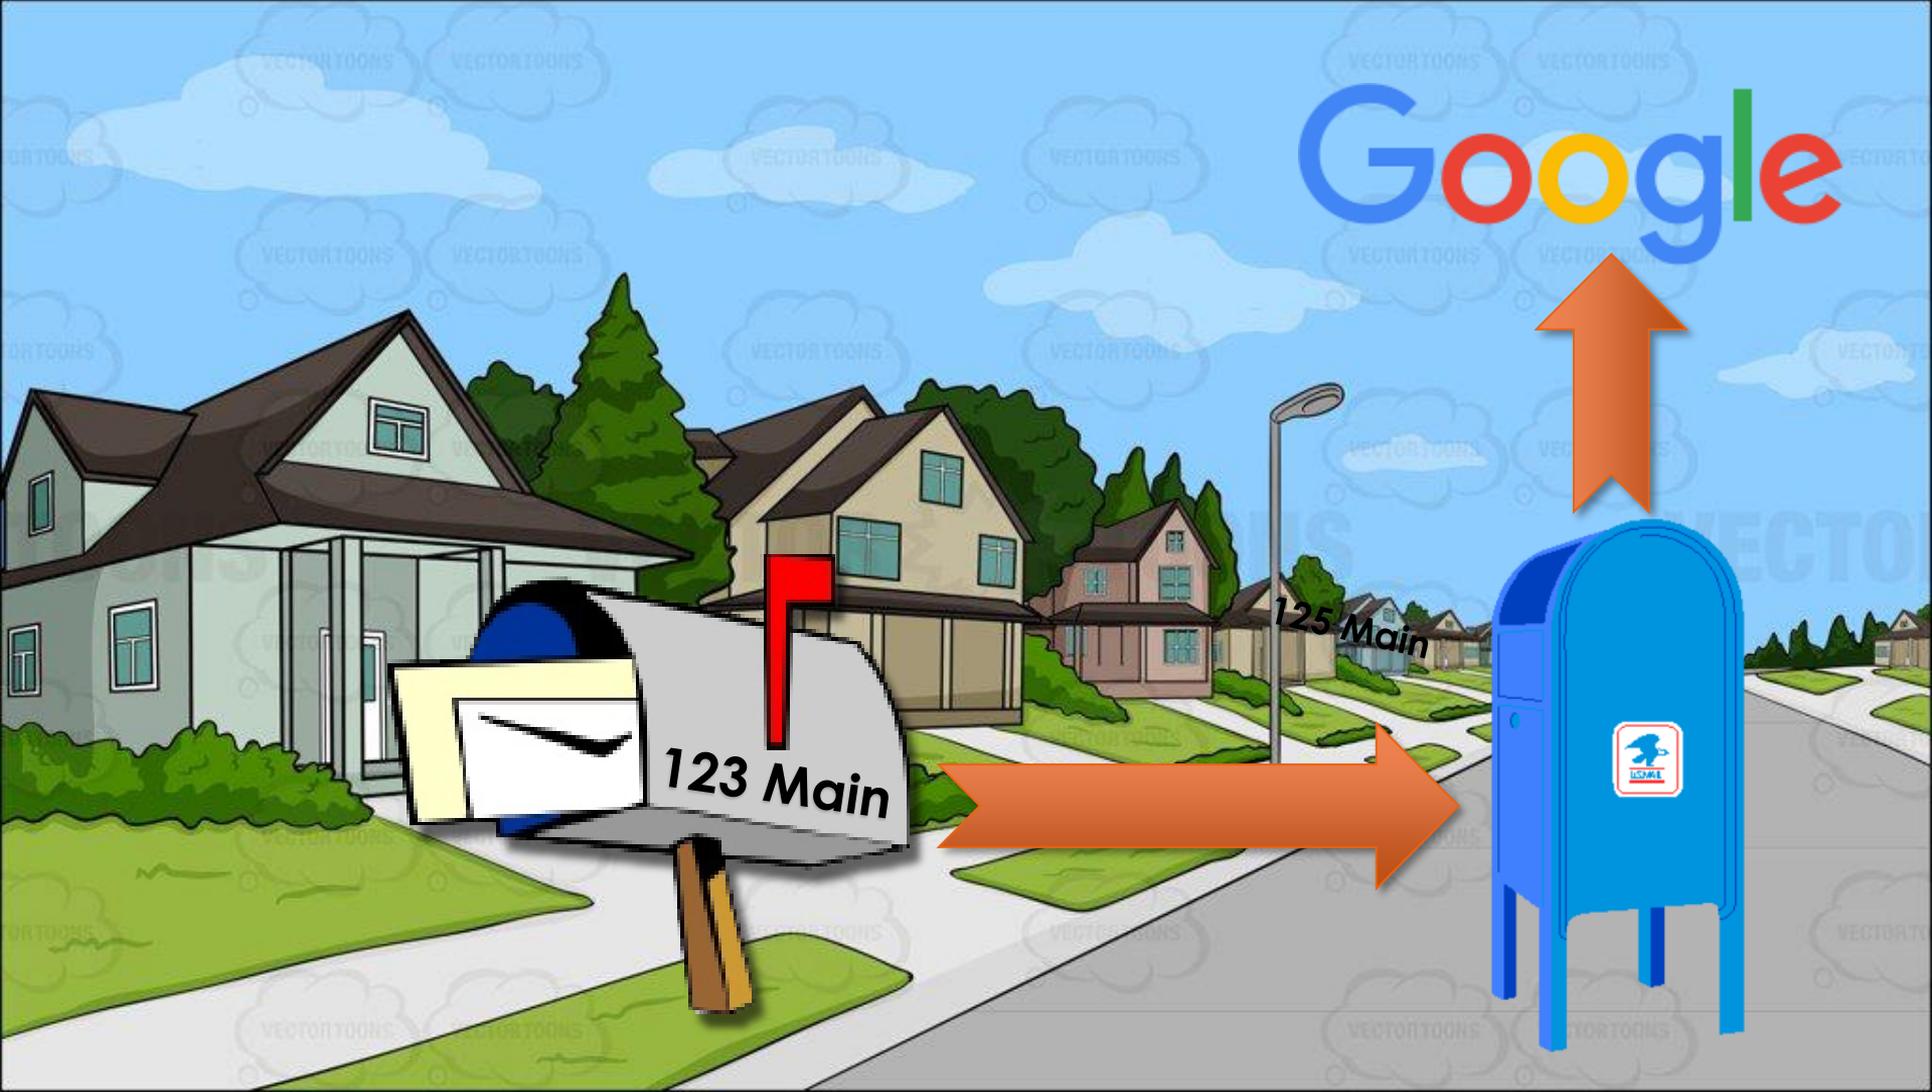

Google

123 Main

125 Main

Google

123 Main

125 Main

Google

192.168.1.123

172.215.15.110

192.168.1.123

172.215.15.202

192.168.1.1

172.215.15.110

IP : 192.168.1.123
Subnet: 255.255.255.0
Gateway: 192.168.1.1

Gateway Rules

- ▶ Gateways are not required
- ▶ A device should only ever have one gateway
- ▶ If you want a device to communicate past the network it is on, it has to have a gateway
 - ▶ Ex. Pi with a static IP has to have a gateway to reach the FPP update server on the internet

Building a Light Show Network

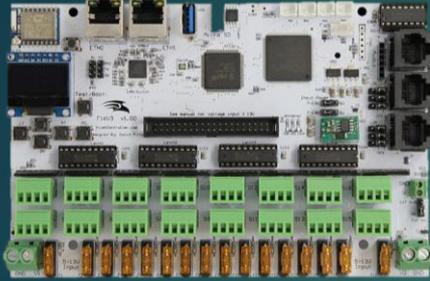

Why Build a Show Network?

- ▶ Easier to manage, troubleshoot, and configure
- ▶ Keep lighting data separate from Netflix
 - ▶ Wifi has to share Breaking Bad with Megatree data
 - ▶ Router may support bandwidth, but packets will get delayed or lost
 - ▶ Jitter can cause issues in shows
- ▶ Survivability

Network A: Switch-Only

192.168.1.10

192.168.1.12

192.168.1.11

Network A Notes

- ▶ All devices have to have IP address set static
- ▶ No DHCP for new devices plugged into network
- ▶ Simplest, most foolproof network design
- ▶ No internet access on network

Network B: Router

192.168.1.1

DHCP

192.168.1.10

192.168.1.11

Network B Notes

- ▶ Show devices should be set to static IP (or a reservation)
 - ▶ Make sure they are not in the DHCP server range
- ▶ If router has WiFi, make sure it is on a different channel than home WiFi
- ▶ Router can be connected to home network to provide internet access for show network
 - ▶ Make sure IP range of show network is different than home network

Network C: Pi Gateway

DHCP

Home
Network

192.168.1.11
192.168.2.11

192.168.2.10

Show Network

Network C Notes

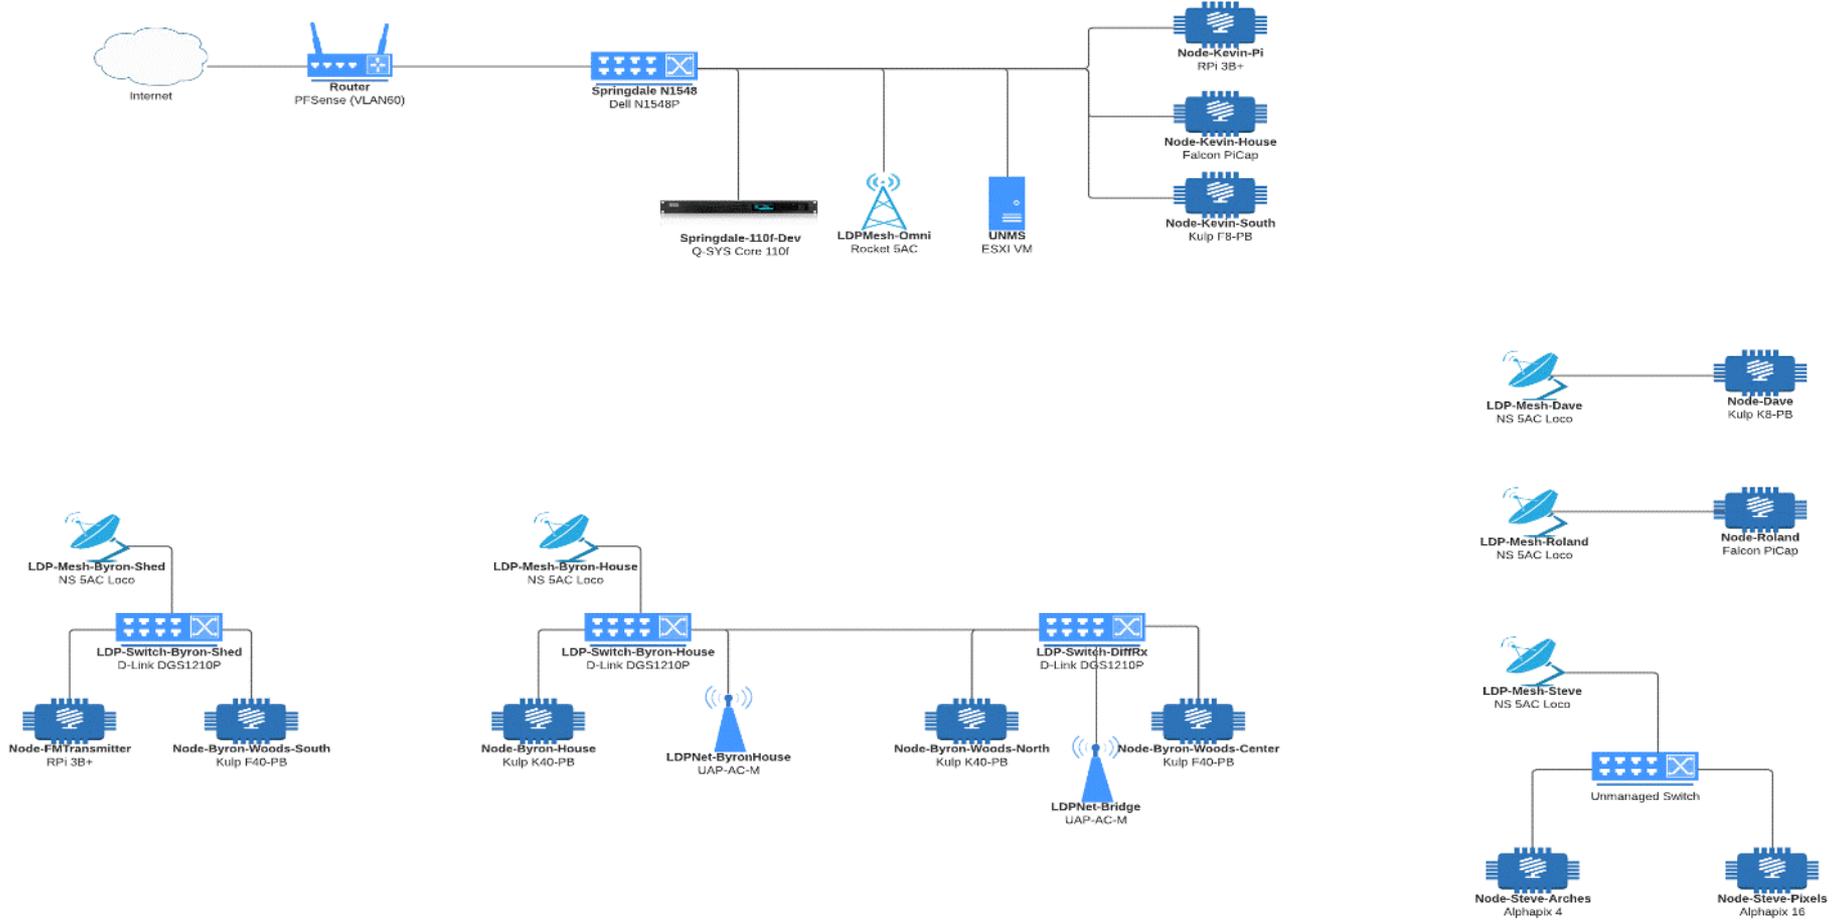

- ▶ Show Network and Home network **MUST** have different IP address ranges
- ▶ Not able to directly access devices on show network without connecting to it, unless static routes are established on PC
- ▶ **Make sure only the Home network has a gateway set on the Pi network config**

Network D

LDPLights Show Control Network
